

Advanced Remediation Technologies Co. (ART) was created to serve clients as a cost effective mechanism to provide a full spectrum of remediation services. ART is a leader in providing comprehensive remediation engineering, construction, and operation and maintenance services.

ART is experienced with a variety of remediation techniques for soil and groundwater and is backed with over 20 years of combined experience. ART's design/build capabilities are unique in the environmental industry and has a proven record of accomplishment at reducing time to implement and total costs compared with traditional design/bid/build methods.

Our extensive remediation services include; successful regulatory cleanup level negotiations, treatability studies for in-situ and ex-situ technologies, interim corrective measure implementations, full-scale corrective actions, and closure with no further action
